data.world

The Modern Data Catalog for Insurance

Insurance is one of the most data-driven — and data-reliant — industries in the world. It's at the core of every decision from underwriting, to rating, pricing, claims handling, and risk assessment. As Insurtech startups, unburdened by layers of tech and infrastructure, work to unseat their competitors, the playing field has grown more complex. And regulatory headwinds have grown stronger in an attempt to protect consumer data privacy rights. That's why you need access to high-quality, relevant data and data governance.

That's where data.world comes in.

Industry Overview

Insurance professionals need to:

- Leverage data as an asset
- Navigate evolving market risks
- Stay compliant with regulations, even as your data grows in volume and complexity
- Seamlessly integrate customer lists and other data from M&A

data.world solutions can help:

- Govern sensitive customer data
- Pair third-party data to relevant claim and prospect information
- Predict and mitigate risk, internally and for customers
- Automate regulatory compliance

Customers

Insurance professionals prepare for the unexpected. Data.world does too.

Imagine having a crystal clear view of all of your data resources in one place: policy data, customer information, claims history, regulatory requirements, prospect tracking, and more. That's what we deliver. What if you could pair weather data and geo-specific risk factors with prospect and customer records, and unlock the ability to prepare customized personal and commercial property coverage solutions? When you need insight into coverage gaps and your book of business and how it all connects, that data is already at-hand.

Better risk calculation

Faster insights mean faster delivery of risk assessments. Understand relationships and connections across your data, so you can act faster to improve customer experiences and offer the best options in the market.

Infinite scalability

Insurance professionals deal with massive waves of data that increase in volume every day. Stay organized and scale with your data in a highly efficient manner. No need to sacrifice governance or reliability.

Federated search

With so much data on hand, you need laser-like focus. Find specific data with a federated search functionality across the cloud and on-prem. Save time you'd otherwise spend sifting through irrelevant information.

Why data.world for insurance?

Data.world helps insurance professionals make better decisions with governed discovery of data, reports, and critical metrics. You don't need to keep your underwriters, agents, and data people waiting. Self-serve all of the information you need to create a trusted map of the intricate relationships between assets, people, domains, and processes.

Data.world unlocks new capabilities for insurance:

Find data 10x faster: Use data.world's chat-like experience for finding data and all of its relevant context. Everyone from data teams to business users can find the information they need to solve problems, 10x faster.

Increase use of trusted data assets: Grow exponentially more efficient with the observability that comes with automated monitoring and alerting. Drop crucial updates right where your data users live and breathe: in places like Tableau, Power BI, and Sigma.

Be foundationally ready for AI: When it comes to predicting risk, processing claims, and optimizing customer experience, generative AI is a race. Embrace it and gain a competitive edge. Data.world is designed to give LLMs the rich context needed to generate outputs you can use that are accurate, explainable, and governable.
